

United One (Group) America Expands UOG Performance Sports Socks for Golf, Tennis, Caddies and Athletes

Made-in-USA UOG sports socks bring wearable wellness technology to golf, tennis, pickleball, running, fitness and everyday active lifestyles.

ATLANTA, GA, UNITED STATES,

September 18, 2026 /

EINPresswire.com/ -- United One

(Group) America Expands [UOG Performance Sports Socks](#) Line for

Golf, Caddies, Tennis and Multi-Sport Athletes

Made-in-USA performance socks bring UOG's CES 2026 award-winning wearable wellness technology to athletes, caddies and active consumers across multiple sports

United One (Group) America, Inc. today announced the continued expansion of its UOG Performance Sports Socks portfolio, introducing specialized wearable products designed for golf, professional caddies, tennis, pickleball and multi-sport activities.

The expanding collection represents the next stage of UOG's strategy to bring its wearable wellness technology directly into products athletes and active consumers can wear during training, competition, work and everyday activities.

UOG sports socks

BETTER BALANCE. STRAIGHTER SHOTS.

 Foot Stability

 Arch Support

 Longer Drives

UOG Pro Golf Socks — Made in USA performance technology designed for comfort, stability and extended play.

The UOG sports sock portfolio now includes:

UOG 5-in-All Wellness Golf Socks

UOG 5-in-All Wellness Caddie Socks

UOG 5-in-All Wellness Performance Sports Socks

UOG 5-in-All Wellness Tennis Socks

Each product is designed around the movement patterns and extended-wear demands of its intended activity while sharing UOG's underlying wearable technology platform.

"Performance begins from the ground up," said David Kim, V.P. of United One (Group) America, Inc. "Golfers, caddies, tennis players and athletes place very different demands on their feet, but they all need stability, comfort and support during movement. Our goal is to bring UOG technology directly into something athletes already wear every day."

From One Technology Platform to Multiple Sports

UOG's approach differs from developing a single performance sock intended for every activity.

Instead, the company is building a family of specialized products based on one underlying wearable wellness platform.

Golf requires stability throughout the stance and swing.

Caddies may spend hours walking, standing and carrying equipment across a golf course.

The poster features the CES 2026 logo at the top left, with the text "Powered by The Consumer Technology Association®". Below it, the text "CES® 2026" is prominently displayed. The main headline reads "Advanced Wellness. Elevated Performance." followed by a sub-headline: "United One Group (UOG) Healthcare Products achieved major recognition at CES 2026, winning 3 prestigious awards and being officially featured by a CES spokesperson." The central image shows a man in a black athletic suit with various UOG products highlighted by callouts: "5-in-All Wellness Band" (enhances rest & recovery), "Arm Sleeves" (promotes circulation & reduces fatigue), "Tank Top" (supports posture & core stability), "Bodysuit Shaper" (contours & supports for a streamlined fit), "Shapewear Control Pantie" (provides shaping & confidence), "Knee Sleeves" (stabilizes & supports knee performance), "Calf Sleeves" (improves circulation & reduces soreness), "Pain Relief Socks" (helps reduce foot pain & swelling), and "Pro Sports Socks" (cushioned comfort & moisture-wicking). At the bottom left, three award trophies are shown: "TechRadar Best of CES 2026 Winner", "TWICE Picks Awards 2026 Winner", and "TWICE Picks Awards 2026 Winner". The bottom right corner features the UOG Healthcare Products logo and tagline "Innovative Wellness Solutions for a Better Life." along with icons for "Advanced Technology", "Quality Assurance", "Health & Wellness", and "Global Vision".

UOG CES 2026 Awards

UOG Knee Sleeves

Tennis and pickleball require repeated lateral movement, acceleration and directional changes.

Running, fitness and other sports place their own demands on the feet and ankles.

UOG develops products around these different environments while maintaining a common focus on comfortable support, movement and extended wear.

UOG Golf Socks — Support From the Ground Up

UOG 5-in-All Wellness Golf Socks are designed for golfers who may spend several hours walking, standing and repeatedly transferring weight throughout a round.

The product focuses on foot stability, arch support, balance and fatigue-reducing comfort.

UOG describes the concept simply:

Feel Better. Swing Better. Walk Better.

The socks are designed to provide a supportive foundation from the first tee through the final putt, whether the golfer is competing, practicing on the range or playing recreationally.

The company's current product materials emphasize stability, arch support and extended-wear comfort as key elements of the golf design.

UOG Caddie Socks — Built for the Demands of Caddie Life

Caddies face a different performance environment.

A caddie may walk an entire course, stand for extended periods, carry equipment and continue working through changing terrain and weather conditions.

UOG 5-in-All Wellness Caddie Socks were developed around those demands.

UOG 5-in-All Wellness Band: Multi-scene Relief

Deep Sleep

Enhance sleep quality, relieve insomnia.

Headache Relief

Soothe tension headaches and migraines.

Eyesight Support

Improve vision, reduce eye strain.

Neck & Shoulder Pain Improvement

Alleviate chronic neck and shoulder discomfort.

UOG Wellness Band

The design focuses on:

- All-day arch support
- Fatigue-reducing comfort
- Foot stability and balance support
- Breathable construction
- Extended-wear comfort
- Freshness and odor-management support

UOG's current Caddie Socks are specifically positioned for professionals who walk, stand, carry and guide throughout long rounds.

UOG Tennis Socks — Court-Ready Comfort

Tennis and pickleball create another set of performance demands.

Players repeatedly accelerate, stop, pivot and move laterally across the court.

UOG 5-in-All Wellness Tennis Socks are designed around these movements, with emphasis on court stability, arch and ankle support, lateral movement and extended-play comfort.

The product extends UOG's wearable technology platform into racquet and paddle sports while maintaining the company's focus on products that can be worn naturally during activity.

UOG Performance Sports Socks — One Pair for Multiple Activities

The broader UOG 5-in-All Wellness Performance Sports Socks are designed for consumers and athletes participating in multiple activities.

Potential applications include:

- Running
- Basketball
- Baseball
- Soccer
- Golf
- Tennis
- Pickleball
- Fitness and gym training
- Walking and hiking
- Everyday active use

The product combines performance-oriented construction with UOG's focus on foot stability, ankle support, breathable wear and extended comfort.

[Black Diamond Carbon & Nano Silver Technology](#)

At the center of the UOG wearable platform is the company's Black Diamond Carbon & Nano Silver Technology.

According to UOG's technology materials, specialized carbon-based materials are incorporated into wearable textile applications, while Nano Silver Technology is incorporated into selected products with an emphasis on freshness and odor management.

The technology is incorporated directly into wearable products rather than requiring a separate electronic device.

There are:

No batteries to recharge

No apps to install

No electronic sensors to manage

No complicated setup

The concept is straightforward: integrate the technology directly into products people already wear.

From CES 2026 Recognition to Everyday Sports

UOG's expanding sports portfolio follows recognition received at CES 2026.

UOG products received three editorial awards associated with the company's wearable wellness products, including recognition from TWICE Picks and TechRadar Pro Picks.

That recognition initially brought attention to UOG's broader wearable wellness platform.

The company is now extending the same development philosophy into increasingly specialized sports applications.

Rather than requiring athletes to add another device to their equipment, UOG is working to integrate its technology into apparel and wearable products that already form part of their normal routine.

Made in the USA

The expanding UOG Performance Sports Socks portfolio is manufactured in the United States.

Domestic manufacturing is a central component of United One (Group) America's product strategy, allowing the company to integrate product development, material selection, manufacturing and continued product refinement within its U.S. operations.

The company's website currently describes UOG as developing and manufacturing premium sports performance and everyday wellness products in the USA.

"We are moving from a wellness product company toward a broader wearable performance platform," Kim said. "The opportunity is much larger than one sock or one sport. We want to develop specialized products for the way people actually move — whether they are playing golf, working as a caddie, competing on a tennis court, training in a gym or simply staying active every day."

Building a Broader Sports Performance Platform

United One (Group) America plans to continue developing UOG products for specialized sports and active-lifestyle applications.

The company's long-term strategy is to combine:

Wellness + Performance + Advanced Textile Technology + Everyday Wear

The expanding Sports Socks collection illustrates that strategy by taking one underlying technology platform and adapting it to different athletic environments.

From the golf course to the tennis court, from professional caddies to multi-sport athletes, UOG's objective is to make wearable wellness and performance support something people can simply put on and use as part of everyday activity.
