EiQ by LRQA positioned as an Innovator in the 2026 Verdantix Green Quadrant for Supply Chain Sustainability Software

EiQ by LRQA earns a place in the independent 2026 Verdantix benchmark of 16 supply chain sustainability software providers, recognised for its audit data.

LONDON, UNITED KINGDOM, September 18, 2026 /EINPresswire.com/ -- EiQ by LRQA has been positioned as an Innovator in the Verdantix Green Quadrant: Supply Chain Sustainability Software (2026), an independent benchmark of 16 supply chain sustainability software providers.

The Verdantix Green Quadrant is a fact-based assessment that evaluates providers on their product capabilities and market momentum. The 2026 edition drew on live product demonstrations, 27 interviews with software buyers, and a 75-point questionnaire covering 10 capability and 12 momentum categories.

In its assessment, Verdantix recognised EiQ's use of LRQA's global audit network, combined with third-party assessment data, to give organisations a clearer view of supplier sustainability risk and due diligence across their supply chains.

EiQ is built on data from LRQA's responsible sourcing audit network: more than 30,000 on-the-ground audits a year across 100+ countries. The platform combines this audit intelligence with third-party assessment data and continuous incident monitoring, and connects supplier risk assessment, corrective action and supplier training in a single platform.

"To be positioned as an Innovator in a fast-moving and consolidating market reflects where we have taken EiQ. Our platform is built on proprietary audit data that others cannot replicate, it connects the full responsible sourcing picture rather than solving one part of it, and it is backed by a team with deep expertise in this field. We are proud of this recognition and focused on continuing to build for our clients," said Kevin Franklin, CEO of EiQ.

About EiQ by LRQA
EiQ by LRQA is a supply chain risk and sustainability due diligence platform. It helps global brands identify and manage human rights, environmental and labour risks across their supply chains, combining proprietary audit data from LRQA's global audit network with AI-powered analytics, incident monitoring and product-level risk ratings.
