

Accurant International Acquires 60Hertz Energy, Expanding Its Asset Management Capabilities Across the Energy Transition

Accurant International announces that it has completed the acquisition of 60Hertz, a leading CMMS provider serving generation assets & utility infrastructure.

BAINBRIDGE ISLAND, WA, UNITED STATES, September 18, 2026 /EINPresswire.com/ -- Accurant

“

As generation becomes more distributed and the grid continues to evolve, asset owners and utilities need better tools to manage the growing complexity of their infrastructure.”

*Bahman Hoveida, President
and CEO, Accurant
International*

International today announced that it has completed the acquisition of 60Hertz Energy, a leading Computerized Maintenance Management System (CMMS) provider serving renewable generation assets and utility infrastructure. Following Accurant's earlier investment in 60Hertz, the acquisition reflects Accurant's confidence in 60Hertz's platform to serve as a modern capable CMMS and Asset Management platform for the entire utility operations including generation, substation, and grid operations.

60Hertz will continue to operate under its own brand, supporting its existing utility, developer, service company,

and renewable operator customers while extending its offerings to Accurant's utility and grid operations customers.

Expanding Accurant's Energy Technology Portfolio

Founded in 2017 in Anchorage, Alaska, by Piper Foster Wilder and cofounder Tonya James, 60Hertz began as a microgrid maintenance software company, serving remote communities across Alaska, and international emerging markets. The pair expanded the platform to support comprehensive maintenance of a wide range of renewable generation assets including wind, solar, battery storage, backup generation, and virtual power plants as well as utility substation maintenance, for organizations of various sizes, from small to very large operators.

The 60Hertz platform provides utilities, developers, and asset operators with tools to manage maintenance activities across distributed generation, batteries and utility infrastructure. Its portfolio-level capabilities provide visibility into asset health and maintenance status across diverse fleets and geographies.

60Hertz's mobile-first, offline-capable platform pairs a web portal and designer with field tools that guide technicians through preventive, predictive, and corrective maintenance, even in low-connectivity environments. The 60Hertz API integrates with numerous generation and substation hardware vendors, giving operators a unified network operations center from a laptop or mobile device. The platform's substation preventive maintenance tools help utilities standardize inspection schedules and safety protocols across transformers, switchgear, and other primary substation equipment.

Supporting Continued Growth

"60Hertz is a natural fit within Accurant's portfolio of companies focused on solving some of the most important challenges facing the energy industry," said Bahman Hoveida, CEO of Accurant International. "As generation becomes more distributed and the grid continues to evolve, asset owners and utilities need better tools to manage the growing complexity of their infrastructure. 60Hertz has built a strong platform and customer base, and we look forward to supporting the company as it continues to grow."

60Hertz founder Piper Foster Wilder added, "We built 60Hertz around the needs of asset owners and operators working in some of the most challenging environments in the energy industry. Accurant understands the importance of reliable infrastructure and brings deep experience across the utility and energy technology markets. We are confident that Accurant is the best possible long-term brand and home for our customers and our team."

This acquisition will support 60Hertz's growth by enabling further platform development, expanding its reach into new markets, and scaling its ability to serve utilities and generation asset operators globally as part of Accurant's broader portfolio of grid modernization technologies.

The acquisition further expands Accurant's portfolio of companies addressing critical areas of the evolving energy landscape, including grid modernization, grid intelligence, distributed energy resources, EV management, and generation and grid asset management.

About 60Hertz Energy

Founded in 2017, 60Hertz Energy is an Anchorage, Alaska-based O&M software platform focused on generation assets and utility infrastructure. The software serves more than 1 GW of assets, with more than 250,000 maintenance records processed annually on its Computerized Maintenance Management System (CMMS) alone. The platform helps organizations manage preventive, predictive, and corrective maintenance for solar, storage, backup generation assets, and virtual power plants, as well as utility substations, helping operators reduce downtime, cut truck rolls, dispatch technicians, comply with service agreements, and extend asset life. 60Hertz's technology has supported maintenance operations across generation portfolios and utility infrastructure in the United States, the Arctic, and Africa. The company originated as a microgrid maintenance platform serving remote communities before expanding into its current scope.
