Hair of Istanbul Publishes Patient Education Guide to OrganTech's Hair Follicle Regeneration Research

The patient guide explains OrganTech's laboratory research, its limitations and the steps still needed before clinical use.

ISTANBUL, TURKEY, September 21, 2026 /EINPresswire.com/ -- Hair of Istanbul, a hair transplant clinic based in Istanbul, has published a patient education guide summarizing hair follicle regeneration research being conducted by OrganTech, Inc., a Tokyo-based regenerative medicine company.

The guide is based on written responses provided directly by OrganTech dated September 8, 2026. Hair of Istanbul states that it has not independently verified the underlying research and has not sought comment from other groups working in the field. The document presents OrganTech's account of its work and identifies its source and limitations.

According to those written responses, OrganTech reported in February 2026 that it had generated hair follicles in the laboratory using three cell populations derived from adult mouse follicles. The account describes a supporting cell population that enabled the follicles to enter the growth phase under laboratory conditions. These findings concern animal-derived cells and should not be interpreted as evidence that a treatment is available for patients.

The guide distinguishes between two approaches under development: cell transplantation, intended to reactivate existing dormant follicles, and organ regeneration, intended to create new follicles from expanded cell populations. OrganTech stated in its responses that these approaches had not yet reached clinical treatment or practical application in humans.

The publication also outlines development questions involving safety, quality, reproducibility and manufacturing. It encourages readers to distinguish laboratory findings from clinical evidence

and to assess progress through documented scientific milestones rather than projected treatment dates.

Hair of Istanbul has no commercial or clinical relationship with OrganTech and does not offer any treatment based on this research. The guide is an educational reference, not an independent scientific assessment or an announcement of a new clinical service.

The full patient education guide is available on Hair of Istanbul's website.

About Hair of Istanbul
Hair of Istanbul is a hair restoration clinic in Istanbul, Turkey, founded in 2013. The clinic offers hair transplantation for international patients and publishes educational material on hair loss and restoration. Information on its website does not replace an individual medical assessment.
