

Leash Life Launches to Bring the Whole Household, and the Whole Pet Industry, Onto One Leash

One shared feed for every pet and every human in the house — and role-scoped tools for the vets, walkers, groomers and sitters who care for them.

HAMPTON, NH, UNITED STATES,

September 21, 2026 /

EINPresswire.com/ -- [Leash Life](#) has officially launched, giving pet households something they have never had: a single, live, shared record of every walk, meal, med and moment for every pet in the home — visible to every member of the family the second it happens.

The company was founded on a problem nearly every multi-pet, multi-human household knows by heart: nobody ever knows if the dog has been fed. One person feeds her, another feeds her again, the sitter guesses, and the vet gets a shrug when asked how long the limping has been going on.

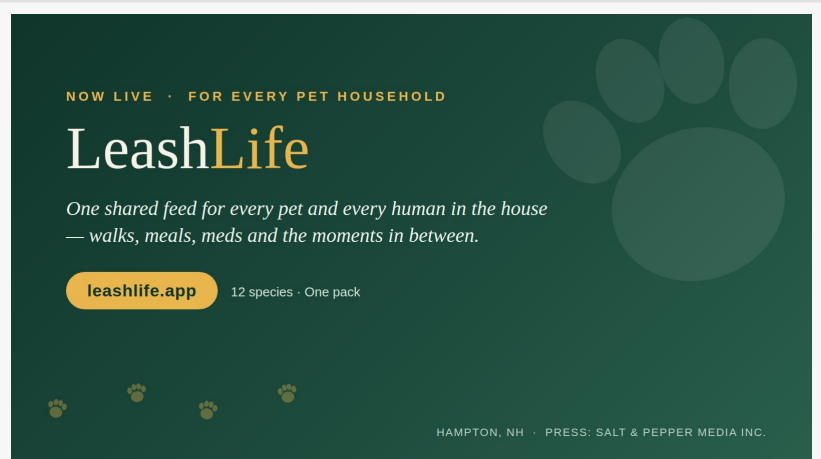

“

We built Leash Life because our own house couldn't answer a simple question: did anyone feed the dog?"

Michael P. Ryan, co-founder of Leash Life

"Existing pet apps track one pet for one person; the household — the kids, the co-owners, the grandparents, the dog walker — has been left off the leash," said [Michael P. Ryan](#), co-founder of Leash Life.

"We built Leash Life because our own house couldn't answer a simple question: did anyone feed the dog?" added Ryan. "Now the whole family sees every walk, meal and med the moment it happens."

Leash Life has officially launched, giving pet households something they have never had: a single, live, shared record of every walk, meal, med and moment for every pet in the home — visible to every member of the family the second it happens.

For households, Leash Life solves the everyday problems first:

- One shared pack feed — every pet and every human in the house on a single live timeline, with a real-time activity bell and full history
- One-tap walk and ride logging with GPS routes, plus a breed-aware walk planner with weather and heat alerts
- Care schedules and reminders for meds, vaccines, grooming and weigh-ins — a due med becomes a task on the pet's day
- A chore chart that assigns pet chores to the kids, with points and streaks
- Kitchen display, TV mode and idle screen-saver views that turn any old tablet into the family pet board
- Support for 11 species — dogs, cats, rabbits, birds, fish, hamsters, guinea pigs, ferrets, reptiles, chickens and horses — each with its own real routine

When the bad day comes, Leash Life is built for it:

- Lost-pet BOLO ("be on the lookout") broadcasts that alert everyone nearby, with auto-expiring alerts and a public first-hour lost-pet playbook — including 124 breed-specific versions
- Smart QR/NFC collar tags: a stranger's scan opens a live help page with photo, tap-to-call and how-to-approach guidance — never the family's surname or street address
- Printable rescue cards, tear-off flyers, wallet pet cards and a one-button sitter handoff packet
- Offline-cached first-aid guides and community hazard alerts reported right from the walk

For the industry, [Leash Life ships professional tools](#) from day one:

- Pro walker packs — one login for a professional serving many households, scoped to exactly what a walker needs
- Pro care codes — a vet, groomer or sitter opens a role-scoped slice of the record with a 6-digit owner-minted code and no account: groomers never see meds, and only the vet sees weight
- Time-limited, revocable health-card links that give a vet the medical file for a window the family chooses
- A nationwide community map of vets, parks, day-cares and groomers, with partner pages for practices and businesses
- A curated pet store of verified products matched to the actual pet, plus a creator program for pet influencers

Privacy is engineered in, not promised: last names never appear on any public surface, and every role — family member, kid, guest walker, follower, professional — is scoped in the database itself.
