

Wise Hustlers Introduces Enerxia, an Oil & Gas ERP Platform for Angola

New enterprise platform unifies finance, procurement, assets, workforce, and reporting for Angola's oil and gas operators into one system.

LUANDA, ANGOLA, September 21, 2026 /EINPresswire.com/ -- [Wise Hustlers](https://www.wisehustlers.com) Technologies Pvt Ltd, an ISO 9001:2015 and ISO/IEC 27001:2022 certified, and SOC 2 compliant [enterprise software](#) studio, today announced the introduction of Enerxia, an [oil and gas](#) Enterprise Resource Planning platform built for businesses operating in Angola's energy sector.

Enerxia, an oil and gas ERP platform built by Wise Hustlers Technologies for businesses operating in Angola's energy sector.

“

Angola has a significant and complex energy ecosystem, and businesses need digital platforms that bring their operations, people, assets, and financial processes together.”

*Shubham, Founder & CEO,
Wise Hustlers Technologies*

Oil and gas companies typically operate across complex, distributed environments - equipment, field operations, contractors, suppliers, employees, warehouses, and multiple projects running at once. When these are managed through disconnected spreadsheets and siloed systems, management teams lose real-time visibility into what's actually happening across the business. Enerxia was built to solve that by bringing financial management, procurement, inventory, assets, workforce, projects, vendors, maintenance, and reporting into a single, connected platform.

Rather than offering a generic ERP experience, Wise Hustlers designed Enerxia around the practical realities of operating in Angola - coordinating local teams, suppliers, contractors, assets, and financial activity across multiple

operational environments, from head office to remote field sites.

The platform is built on an integrated architecture, so departments work from one shared system instead of parallel spreadsheets. A procurement request can move through approval,

become a purchase order, link to a supplier, arrive into inventory, and land in financial records automatically. An asset can be tied to a project, assigned to an employee, tracked through its lifecycle, and connected to its maintenance history and cost - all without re-entering the same data in three different places.

Enerxia gives management teams centralized dashboards covering procurement activity, inventory levels, purchase orders, supplier performance, project status, asset utilization, maintenance schedules, workforce data, revenue and expenses, and budget utilization - pulling information from across departments into one view instead of requiring managers to assemble it manually from separate systems.

The platform is modular by design. Organizations can start with the modules most relevant to their current operations - finance, procurement, inventory, assets, HR, projects, vendor management, maintenance, documents, reporting, or access control - and expand as their needs grow, rather than adopting a single rigid system on day one.

Because enterprise systems handle sensitive operational and financial data, Enerxia is built with role-based access control, so employees only see the information and functions relevant to their responsibilities, and administrators retain full control over users, permissions, and system configuration.

"Angola has a significant and complex energy ecosystem, and businesses need digital platforms that bring their operations, people, assets, and financial processes together in one place," said Shubham, Founder & CEO of Wise Hustlers Technologies Pvt Ltd. "With Enerxia, we built a platform focused specifically on that need, rather than adapting a generic ERP to fit."

Enerxia is a web-based platform, giving distributed teams - management, finance, procurement, project managers, warehouse staff, HR, and field operations - access to shared, relevant business information regardless of which office or site they're working from.

The introduction of Enerxia comes as Angola's oil and gas sector, like much of the industry globally, looks to digital systems to improve efficiency and visibility. For most organizations, that shift means more than digitizing paper processes - it requires systems that connect departments, manage approval workflows, and surface timely information for decision-makers, which is the gap Enerxia is built to close.

Enerxia's integrated finance and procurement modules give management real-time visibility across budgets, purchase orders, and supplier activity.

Wise Hustlers Technologies is a certified enterprise software and mobile app development studio that has delivered more than 100 products, platforms, and applications for clients across Africa, the US, Canada, and the UAE. Enerxia extends the company's enterprise technology work into Angola's energy sector specifically.

Organizations interested in Enerxia, module customization, or an enterprise implementation can contact Wise Hustlers Technologies directly.
