

Relanto Achieves OpenAI Select Partner Status

Advancing enterprise AI at scale, where intelligence drives governed execution and growth.

ISSAQUAH, WA, UNITED STATES,

September 21, 2026 /

EINPresswire.com/ -- Relanto, an AI-first technology company combining product innovation with enterprise consulting and engineering, today announced that it has achieved OpenAI Select Partner status, a milestone in the company's continued investment in enterprise AI.

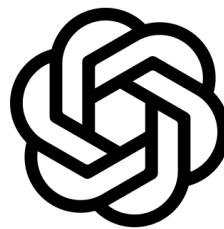

As AI becomes core to how enterprises compete and operate, the priority is to scale its impact across the business.

This requires engineering depth, enterprise integration, and effective governance of performance, security, and economics. Relanto brings these capabilities together to help clients embed AI into business-critical operations and deliver sustained business value. As an OpenAI Select Partner, Relanto will continue advancing its work in intelligent applications, agent-driven workflows, and enterprise AI transformation.

Connecting business ambition with intelligent execution

Relanto's Convergence 3.0 vision centers on bringing business ambition and technology execution closer together. Sales 3.0 reimagines how enterprises plan, pursue and deliver growth, while Software 3.0 enables systems to become more responsive to business intent. Relanto applies OpenAI technologies at this intersection, helping enterprises translate strategic decisions into coordinated, governed action across the revenue lifecycle.

"OpenAI Select Partner status is an important milestone in our mission to help enterprises scale AI with measured accountability," said Rajan Gaur, Chief Executive Officer of Relanto. "By bringing commercial strategy and intelligent execution closer together, we will help enterprises prioritize faster and operate with greater precision."

As execution becomes increasingly AI-driven, governance is critical to scaling AI responsibly. Relanto's recent launches of [R-LiveMeasure™ for Agent Governance](#) and [R TokenomIQ™ for Token Governance](#) reflect this commitment, addressing enterprise priorities around agent performance, AI consumption, and value accountability.

"Becoming an OpenAI Select Partner aligns with our conviction that AI will reshape the relationship between business ambition and what enterprise systems can deliver. As software becomes more responsive to business intent, enterprises will have new ways to create value across the revenue lifecycle. We see a tremendous opportunity to combine OpenAI's advances with Relanto's enterprise expertise to help clients build that future, with intelligence, adaptability, and trust at its core," said Yeshwant Nayak, Chief Operating Officer of Relanto.

Building for the next phase of enterprise AI

Relanto combines applied AI engineering, reusable capabilities, and enterprise delivery expertise to accelerate implementation and expand the use of AI across business functions. This integrated approach brings the technical depth and operational discipline needed to sustain AI at enterprise scale.

Looking ahead, Relanto will continue to invest in the solutions, talent, and ecosystem relationships needed to help enterprises adopt and scale AI responsibly. Achieving OpenAI Select Partner status builds on that commitment and supports Relanto's work to help clients put AI into practice across critical business operations.

[About Relanto](#)

Relanto is an AI-first technology company combining product innovation with enterprise consulting and engineering. Guided by curiosity, creativity, and innovation, Relanto helps enterprises design, deploy, govern, and scale AI across business-critical functions, connecting business ambition with intelligent execution and measurable value. With a diverse global team across North America (USA, Canada, and Mexico), EMEA, and APAC, Relanto supports over 45 global customers in their strategic transformation initiatives. Its products and services bring together enterprise-grade AI innovation and deep expertise in enterprise planning, next-generation architecture, data and analytics, and cloud technologies.
