BougeRV Expands Cold-Weather Outdoor Gear With Portable Diesel Heater

BougeRV expands its cold-weather outdoor lineup with a portable diesel heater and 12V heated blanket for camping, RV travel, and off-grid adventures.

HOUSTON, TX, UNITED STATES, September 22, 2026 / EINPresswire.com/ -- As more campers, RV travelers, and overlanding enthusiasts prepare for colder-weather adventures, BougeRV is expanding its outdoor comfort solutions with portable heating equipment designed for flexible use in campsites, vehicles, RVs, garages, and other off-grid environments.

Cold-weather camping has become an increasingly important part of year-round outdoor recreation. For travelers who want to continue camping beyond the traditional summer season, maintaining a comfortable environment can be as important as choosing the right shelter, power system, and cooking equipment. Portable heating solutions offer an alternative to permanently installed heating systems while giving outdoor users more flexibility across different trips and locations.

BougeRV's Portable Diesel Heater is designed around this need. The 12V diesel-powered unit provides up to 5kW of thermal power and is designed for applications including winter camping, overlanding, RV and van travel, truck use, ice fishing, garages and workshops.

According to BougeRV's specifications, the heater can warm a 307-cubic-foot tent in approximately eight minutes under stated test conditions. Its operating power ranges from 10W to 60W, while fuel consumption is rated at 0.18 to 0.53 liters per hour. The unit weighs approximately 22 pounds and measures 15.3 by 9.7 by 12.4 inches, allowing it to be transported between different locations rather than requiring a permanent installation.

The portable design is particularly relevant for campers and overlanders who regularly change locations. A heating system that can be transported between a ground tent, vehicle, or

temporary shelter can reduce the need to build a separate heating setup for every type of trip.

The heater also incorporates overheat, voltage, and short-circuit protection. It operates on a 12V power supply and is available in configurations that can be paired with a 266Wh battery or compatible portable power equipment, providing additional options for off-grid users planning winter trips.

For outdoor users who prefer localized warmth, BougeRV also offers a 12V Portable Heated Blanket. Rather than heating an entire space, the blanket is designed to provide personal warmth while using a maximum of 48W. It offers five heat levels and includes timer and memory functions, while app control allows users to manage temperature settings and longer timer periods remotely.

The heated blanket features a four-layer construction with plush cotton lining and a removable, washable cover. Its 12V DC design allows it to be used with vehicle power and compatible portable power systems, making it suitable for camping, RV travel, road trips, outdoor events, and other situations where localized warmth is needed.

Together, the two heating products represent different approaches to cold-weather comfort. The diesel heater is designed to deliver heated air for enclosed spaces and temporary shelters, while the heated blanket provides direct personal warmth without requiring an entire space to be heated.

This distinction can be useful for outdoor travelers building modular camping systems. A camper staying in a vehicle or tent may need space heating during particularly cold conditions, while a heated blanket can provide additional warmth when relaxing, sleeping, or spending time outdoors. For longer off-grid trips, combining different heating methods can also allow users to match heating equipment to the situation instead of relying on a single system.

BougeRV's approach reflects the broader shift toward portable and adaptable outdoor equipment. As camping expands beyond short summer trips, travelers are increasingly preparing for changing temperatures, variable weather, and longer periods away from traditional infrastructure. Portable refrigeration, power, and heating equipment can work together as part of a more flexible off-grid setup.

The BougeRV Portable Diesel Outdoor Heater is available through the company's website, with specifications and configurations for different outdoor applications. The BougeRV 12V Electric Blanket is also available as a portable heating option for camping and RV use.

About BougeRV
BougeRV was founded by a group of outdoor vehicular adventurers. The company develops portable power, refrigeration, climate-control, and outdoor living products designed for camping, RV travel, road trips, and off-grid adventures. BougeRV's product ecosystem is focused on

helping outdoor enthusiasts create more flexible and comfortable travel setups for both everyday journeys and extended adventures.
