

"Moon Baby" Explores First Baby Born on the Moon

Short novella explores cosmic themes and fate of humanity

DECATUR, IN, UNITED STATES, September 23, 2026 /EINPresswire.com/ -- Decatur, IN – Victor Beer just released his short novella entitled "Moon Baby" that goes much further than just the

first baby born on the moon. Beer's book brings to the table elements that give it a broad cosmic stance in a universe filled with wonder and mystery. His one-liner certainly sets the tone: The first child born on the moon discovers powers linked to an ancient alien intelligence—and his forbidden love with an Earth girl changes humanity forever.

Beer's book touches upon a subject of much interest given the recent trip around the moon by American astronauts: the first moon birth, the next step after colonization of the moon. Beer has fun with the concept by exploring well-

known facts about the moon. The reduced gravity has effects on the residents that require mandatory genetic adaptation and lunar skeletal modifications. Lack of oxygen also finds underground crews sweating in recycled oxygen and it also affects lunar residents far into the future where they become the next species called the "Lunari." The presence of an alien intelligence on the moon enables the moon baby to have powers like telekinesis and telepathy to advance the human race into the next millennium.

The novella, Moon Baby, is written in short, terse paragraphs that resonate like dialogue in the way they hit the reader. Beer says, "I operate in the area of using short emotional descriptive words that are tuned to a fine edge, often becoming indistinguishable from actual dialogue before the reader realizes what is happening." His ethereal themes are tactfully explored in the story without being too predictable.

Along with Moon Baby, Beer also has two other e-books, Keys to the Cosmos: Insights into Existence and Quick Guide, Dating with Confidence, available on his Stan's Store online at <https://stan.store/victorbeer>. Beer's literary works are featured on his new website, www.cosmicmoondate.com, that enables users to find out what day of the week they were born

and the exact lunar phase was on that particular day. The website calculates the information based on highly accurate astronomical data.
