

Albany Dental Associates Offers Dental Crowns, Emergency Dental and Root Canals

Albany Dental Associates provides dental crowns, emergency dental care and root canal procedures for patients throughout the Albany, NY area.

DELMAR, NY, UNITED STATES,
September 24, 2026 /

EINPresswire.com/ -- Albany Dental Associates, a full-service dental practice serving the greater Albany, NY area, continues to help patients protect and restore their smiles through [dental crowns](#), [emergency dental](#) care, and root canal procedures.

With more than 60 years of combined clinical experience across its team of dentists, Albany Dental Associates has treated over 7,500 patients from its office at 4 Normanskill Blvd #401 in Delmar, just outside Albany. The practice accepts most major dental insurance plans, including Delta Dental, Cigna, Aetna, MetLife, Guardian, and UnitedHealthcare, along with CareCredit financing options.

Dental Crowns

For patients with a damaged, decayed, or weakened tooth, Albany Dental Associates provides custom-fitted dental crowns designed to restore the tooth's strength, shape, and appearance. Crowns are commonly used after a root canal, to protect a cracked tooth, or to cover a large filling that can no longer support the tooth on its own, giving patients a durable, natural-looking result.

Emergency Dental Care

Albany Dental Associates (DBA: Albany County Dental Associates)

Albany Dental Services

A dental emergency doesn't wait, and neither should the care you get for it."

*Dr. Marina Shraga, Albany
Dental Associates*

Dental emergencies do not wait for convenient timing. Albany Dental Associates provides emergency dental appointments for issues such as severe tooth pain, infections under a crown or filling, broken or knocked-out teeth, and dental trauma. The practice prioritizes same-day emergency visits so patients traveling through or living in the Albany area can get relief quickly rather than waiting days for an appointment.

[Root Canal Procedure](#)

When decay or infection reaches the inner pulp of a tooth, Albany Dental Associates performs root canal procedures to remove the infected tissue, clean and seal the canal, and preserve the natural tooth rather than extracting it. A root canal is often followed by a dental crown to protect and strengthen the treated tooth for long-term use.

About Albany Dental Associates

Albany Dental Associates is a family-owned dental practice in Delmar, NY, serving patients throughout the Albany, NY region. The practice offers a broad range of services including dental crowns, root canals, emergency dental care, dental implants, dentures, cosmetic dentistry, clear braces, and facial aesthetics.
