

Edlio Launches PDF Accessibility Tool for School Websites

Edlio Accessible Documents includes PDF remediation and HTML conversion to help schools meet ADA Title II requirements

GLENDAL, CA, UNITED STATES,
September 24, 2026 /

EINPresswire.com/ -- [Edlio](#), a leading K-12 communications platform trusted by more than 19,000 schools across North America, today announced [Edlio Accessible Documents](#)—an AI-powered tool that improves PDF accessibility in multiple ways, creating HTML versions of each document while also providing tools to remediate the original PDF.

Edlio Accessible Documents Helps Schools Easily Remediate PDFs

As schools and districts work to improve digital accessibility ahead of upcoming ADA Title II deadlines, PDFs have posed a particular challenge, as they are not easily remediated, and there are often large numbers of them on school or district sites.

“

While the focus of the moment may be on deadlines and compliance, improving digital accessibility is an ongoing effort...[so] every student, family, and community member is part of the conversation.”

Edlio CEO Ali Arsan

Edlio Accessible Documents addresses both of these issues, and was built to align directly with WCAG, PDF/UA, and ADA Title II, supporting schools in their accessibility and compliance efforts.

“Accessible Documents is the next step in our ongoing commitment to digital accessibility,” said Edlio CEO Ali Arsan. “The foundation of that commitment is designing accessible websites for schools. In 2025, we built on that foundation by launching Edlio Accessibility to give schools the ability to scan and fix issues with site content in one click. Now with Accessible Documents, we are addressing

PDFs, so schools can make both their website and the documents that live on it more accessible to everyone. While the focus of the moment may be on deadlines and compliance, improving digital accessibility is an ongoing effort and we are proud to work with schools and districts to

ensure every student, family, and community member is part of the conversation.”

Key Capabilities of Edlio Accessible Documents:

- Instant HTML Conversion: Every PDF on the school site is automatically converted to an HTML version that becomes the primary document all users see, while the original PDF serves as a print-friendly version. The HTML version is screen reader-friendly, has a customizable view, and features multilingual support.
- HTML Document Chat: HTML versions feature an AI chat interface that summarizes content and allows readers to ask questions within the document.
- PDF Remediation: Original PDFs are scanned according to WCAG 2.2 and PDF/UA (PDF/Universal Accessibility). Common issues are fixed automatically. AI drafts a title, subject, keywords and document language, all of which are editable. Anything needing additional attention is clearly explained with step-by-step instructions for manual fixes.
- HTML to PDF Form Fill: For PDFs with fillable fields, users can complete the form in the HTML version, and information will be transferred to the original PDF.
- Native to Edlio CMS: Accessible Documents provide a seamless experience for Edlio CMS users—both HTML conversion and PDF remediation can be accessed from the same dashboard as other platform features.

In addition to being fully integrated into the Edlio CMS, Accessible Documents will also be available as a standalone solution that can be implemented on any school or district website.

"School and district leaders are navigating a rapidly changing education and technology landscape while managing the daily demands of serving students, families, and communities," said Arsan. "Our journey as a company and our vision for the future have put Edlio in a position where we can help them meet challenges in real time. Accessible Documents is an example of that, and we'll have more innovations to share in the near future."
