DermaSpark Unveils the Next Generation of Its Alpha Platform for Light-Based Aesthetics

Debuting at the Canadian Aesthetics Expo 2026 in Toronto, the system combines XLP™ Diode Laser and 3D IPL to deliver 20+ aesthetic treatments in one platform.

TORONTO, ONTARIO, CANADA, September 24, 2026 / EINPresswire.com/ -- DermaSpark Products Inc., a Canadian distributor of professional aesthetic technologies, is introducing the next-generation Alpha, the latest evolution of its Alpha platform, at the Canadian Aesthetics Expo 2026 in Toronto. The launch takes place at the Toronto Westin Harbour Castle, where providers can see the workstation in person on September 26–28.

Powered by the XLP™ Diode Laser and 3D IPL, the new Alpha is a one-stop workstation built for the most in-demand services in the modern Canadian clinic: from permanent hair removal across all skin tones to pigmentation, vascularity, acne, rosacea, and skin tightening, all on a single system.

One platform, 20+ indications

The Alpha consolidates more than 20 approved medical-aesthetic indications into one workstation, including permanent hair removal on all skin tones, pigmented spots and sun damage, vascular lesions, redness and rosacea, acne vulgaris across all grades, and skin tightening and wrinkle reduction.

The XLP™ Diode Laser

At the core of the new Alpha is the XLP™ Diode Laser, engineered with extended-pulse technology, continuous epidermal cooling, and objective melanin sensing across three dedicated work modes:

PowerMotion™ delivers continuous high-fluence energy in a single smooth pass for faster, more

consistent treatments.
FineMotion™ uses a pulse-modulated approach for predictable results on stubborn, fine, low-melanin hair while protecting the epidermis.
SafeTone™ is a mode designed specifically for the deepest skin tones (Fitzpatrick Type VI), delivering energy in precisely spaced micro-pulses for a controlled, comfortable treatment.

Two intelligent technologies support every treatment: MILO, a digital melanin reader that measures pigment levels in the skin to help personalize safe, effective parameters, and Golden Touch adaptive cooling, which responds to the skin in real time to help maintain patient comfort throughout the session.
Tight & Bright: the signature 3D IPL protocol
The Alpha also features Alpha's signature 3D IPL protocol, Tight & Bright: a tri-action treatment designed to address pigmentation, redness, and laxity together, using a dual-pass delivery approach.

> The Alpha platform earned the trust of Canadian providers by doing more, more safely, for more patients. This next generation is the next chapter of that same story”
>
> *Moshe Ben-Shlomo, Chief Executive Officer, DermaSpark.*

Advancing the platform clinics already trust
The next-generation Alpha is built on the same Alpha platform already in use in clinics across Canada, an evolution of that technology, not a replacement for it. DermaSpark remains committed to its existing Alpha community: current owners continue to be fully supported through the company's certification training, clinical education, and warranty programs, and DermaSpark will work directly with existing customers on their path forward.

The Alpha system is licensed by Health Canada and ships with DermaSpark's standard commitment: complete delivery, staff certification training, a 36-month full warranty, and standard 0% interest in-house financing.

"The Alpha platform earned the trust of Canadian providers by doing more, more safely, for more patients. This next generation is the next chapter of that same story: a more capable

workstation for the clinics that helped us build it and a smarter entry point for those joining us now."
— Moshe Ben-Shlomo, Chief Executive Officer, DermaSpark

Availability
DermaSpark is showcasing the new Alpha at Aesthetics Expo 2026 in Toronto, September 26–28, at the Westin Harbour Castle in Toronto. Providers can book a demonstration with an Alpha expert at Contact@DermaSpark.com, 1-866-237-0849, or www.dermaspark.com.
