# Lake Flooring & Finishes Issues Seasonal Flooring Care Guidance for Lake of the Ozarks Properties

*Camdenton showroom identifies moisture, entryways and unoccupied homes as key considerations as lake properties transition out of peak season*

CAMDENTON, MO, UNITED STATES, September 28, 2026 /EINPresswire.com/ -- Lake Flooring & Finishes has issued seasonal flooring-care guidance for Lake of the Ozarks property owners as lake homes move from peak summer use into a period of more irregular occupancy. The Camdenton company's guidance focuses on moisture, debris at entryways and the conditions inside homes that are closed for extended periods.

Lake homes often experience a concentrated season of wet feet, damp towels, pets, guests and frequent indoor-outdoor traffic. As fall approaches, many owners also begin preparing second homes and vacation rentals for a different pattern of use. Lake Flooring & Finishes said these transitions can affect flooring decisions and routine care, especially in entries, kitchens, baths and other high-traffic spaces.

National insurance data underscores the potential stakes of moisture-related issues. The Insurance Information Institute reports that the average severity of a homeowners insurance claim for water damage and freezing was $15,400 for the 2019–2023 period. The figure is a national insurance measure, not a typical flooring-replacement cost, and it includes a broad range of covered losses. It nevertheless illustrates why water should be addressed before it reaches the flooring system.

A Whole-System Approach

Lake Flooring & Finishes notes that product claims should be read in the context of the complete installation. A water-resistant or waterproof product may help manage ordinary surface exposure, but performance also depends on the subfloor, underlayment, adhesives, transitions, perimeter details and the path water takes around or beneath the finished floor.

The company advises owners to address standing water promptly, use mats or rugs designed for entry areas, keep sand and grit from being tracked across floors, and maintain indoor conditions according to the flooring manufacturer's guidance. Before a home is closed for a season, owners can also check for plumbing leaks, damp areas near exterior doors and signs of movement or

staining around flooring transitions.

Different rooms may call for different material decisions. Lake Flooring & Finishes recommends that property owners consider expected traffic, pet activity, moisture exposure, maintenance preferences, subfloor conditions and occupancy patterns before selecting a floor. The company provides in-home estimates and design consultations to help clients evaluate those factors alongside the look they want for a home.

“Good flooring decisions begin with how a property is actually used,” the company said. “For many Lake of the Ozarks homes, that means accounting for busy summer weekends as well as the quieter months that follow.”

About Lake Flooring & Finishes

Lake Flooring & Finishes is a Camdenton, Missouri, flooring showroom and design resource serving Lake of the Ozarks communities, including Camdenton, Lake Ozark, Osage Beach, Laurie and Sunrise Beach. The company offers hardwood, luxury vinyl, carpet, laminate, tile and wall finishes, with design consultation, in-home estimates and installation services.
