

Dynamic Netsoft Offers UAE E-Invoicing Support for Dynamics 365 Businesses Ahead of the 2027 Mandate

Dynamic Netsoft helps UAE businesses prepare for 2027 e-invoicing mandates with Dynamics 365 compliance, ASP integration, testing, and support.

DUBAI, DUBAI, UNITED ARAB EMIRATES, September 28, 2026 /EINPresswire.com/ -- Dynamic Netsoft Technologies is helping businesses become compliance-ready for [UAE E-Invoicing for Dynamics 365](#), as the country moves through its phased implementation deadlines.

Dynamic Netsoft Technologies, a [Microsoft Solution Partner in the UAE](#), is extending its proven GCC e-invoicing experience to support Dynamics 365 Finance and Business Central users preparing for [UAE E-Invoicing Implementation](#). The offering covers data readiness, ASP integration, go-live testing, and post-go-live support, ahead of the country's first mandatory deadline in January 2027.

The UAE's Electronic Invoicing System was established under Ministerial Decisions No. 243 and 244 of 2025. A voluntary pilot phase opened on 1 July 2026, giving a penalty-free window to test the system early, and it's still open to any business that wants to start testing early, before the mandatory phase applies to them.

Current guidance allows only one ASP per business, covering both sending and receiving invoices, though multi-entity groups can register separate TINs for each entity if needed.

Businesses earning AED 50 million or more a year need to appoint an Accredited Service Provider by 30 October 2026, with the system going live for them on 1 January 2027. Smaller businesses get until 31 March 2027 to appoint a provider, and their go-live date is 1 July 2027. Government entities follow a bit later, by 1 October 2027.

Missing the deadlines carries a real cost. Under the framework, businesses that fail to appoint an ASP or implement e-invoicing on schedule face a fine of AED 5,000 for every month they remain non-compliant, a cost that adds up quickly for businesses that delay preparation until close to their deadline.

Readiness across the country still has a way to go. A June 2026 survey of more than 500 UAE CFOs and tax leaders put national readiness at just 57.5%. Only 14.1% of businesses said they felt fully capable, and 38% admitted their current ERP couldn't produce a compliant e-invoice at all.

Dynamics 365 UAE E-Invoicing compliance depends on a few things lining up: clean customer and vendor data, a properly configured Electronic Reporting framework to map invoices into the PINT-AE format, and a working, tested connection to an accredited ASP.

"E-invoicing shouldn't be treated as a last-minute compliance exercise," said Mr Sirajudeen Ismail, CEO of Dynamic Netsoft Technologies. "Gaps like a missing TRN or a wrongly mapped tax code don't surface until you test a real invoice against the requirement, and by then, if you've waited too long, you're already under pressure. Our focus is helping businesses understand what needs to change, get their Dynamics 365 environment ready, connect with the right ASP, and test the complete invoicing flow before the deadline hits."

Dynamic Netsoft's approach starts with a gap analysis, comparing a business's current Dynamics 365 setup against what UAE compliance actually requires. From there, the work moves into master data cleanup, TRNs, Peppol participant IDs, and tax code mapping, before configuring the Electronic Reporting framework to map invoice fields correctly.

The team also handles the ASP connection itself, onboarding, API integration, validation testing, and supports businesses through sandbox testing before anything goes live. Once a business is live, the company continues supporting configuration as FTA rules and Peppol schema requirements change.

Dynamic Netsoft's support doesn't stop at wiring up a connection. It covers the whole workflow, from the moment an invoice is created through ASP validation, and continues well after go-live to make sure that workflow holds up once it's handling real volume."

The company has spent more than 15 years working across Microsoft Dynamics environments, from AX to F&O, with particular depth in real estate, property management, construction, and finance services. These are industries where multi-entity structures, project billing, and prepayment invoicing already come up constantly in daily operations, and they tend to be exactly where e-invoicing implementation gets complicated.

With the ASP appointment deadline for larger enterprises now a few weeks away, Dynamic Netsoft is currently working with businesses across several sectors in the UAE to assess their Dynamics 365 readiness and close configuration gaps before the January 2027 enforcement date.

About Dynamic Netsoft Technologies:

Dynamic Netsoft Technologies has spent more than 15 years as a Microsoft Dynamics 365 implementation and ERP consulting firm, working to refine business processes and support operational automation for its clients.

The company works closely with property, construction, and finance enterprises going through digital transformation. Its team has helped organisations around the world improve process management, lift productivity, and bring down operational costs. Its Microsoft ISV solutions, built for specific industry verticals, have been recognised for handling the kind of nuanced challenges that come with demanding customers.
