

Introducing EHS Hero Advanced Analytics: 'AI-Powered Risk Management At Your Fingertips'

BLR has introduced Advanced Analytics, a new tool within EHS Hero, designed to give safety professionals tools for data-driven decision-making.

BRENTWOOD, TN, UNITED STATES, September 29, 2026 /EINPresswire.com/ -- BLR has

“

By adding advanced AI-driven analytics to our safety management software, we're giving organizations the ability to move from reactive reporting to proactive prevention.”

Kim St. Lawrence, Sr. VP of Product, BLR

introduced Advanced Analytics, a new tool within EHS Hero, its flagship EHS management platform, designed to give safety professionals tools for data-driven decision-making. With EHS Hero Advanced Analytics, safety and risk management professionals can go beyond basic safety performance reporting with AI-powered features to analyze corrective and preventive actions, audits, incidents, and training datasets.

“By adding advanced AI-driven analytics to our safety management software, we're giving organizations the ability to move from reactive reporting to proactive prevention,” says BLR's President of Product and Strategy,

Kim St. Lawrence. “This functionality not only helps identify hidden trends and root causes faster but also empowers safety leaders with insights to make smarter, data-backed decisions that protect their workforce and strengthen compliance, which is our goal at BLR.”

Advanced Analytics includes interactive, AI-supported dashboards that allow users to configure custom visualizations of their data. Built-in analysis actions support detailed exploration of each datapoint and report, including the ability to identify positive and negative trends, spot outliers, and correlate data in a way that aligns with business needs. Users can ask questions of their data and receive high-level summaries, key observations, and data integrity call-outs. They can schedule regular reports and proactive alerts to stay on top of safety performance and support stakeholder discussions.

Its AI capabilities include enterprise-level security controls and human-in-the-loop feedback intended to support secure data analysis and improve the quality of generated results.

EHS Hero Advanced Analytics helps safety teams analyze data more efficiently, identify trends, and support data-informed risk management decisions. The addition expands EHS Hero's

existing capabilities for helping EHS professionals manage compliance, training, and safety processes across their organizations.
