

Global Clean Energy Reports \$11.5 Million AI Services & Resilience Pipeline Across Commercial & Public-Interest Markets

Company's pipeline includes 38 opportunities across applied AI leadership, data science, workforce delivery, enterprise modernization & resilience intelligence

HOUSTON, TX, UNITED STATES, September 29, 2026 /EINPresswire.com/ -- Global Clean Energy, Inc. (OTCID: GCEI), an AI-powered resilience and sustainable-infrastructure company, today provided an update on the business-development pipeline of its AI Division.

As of September 16, 2026, the Company's internal AI services and resilience opportunity pipeline included 38 opportunities representing approximately \$11.5 million in potential annual contract value. Based on management's internal probability assessments, the pipeline represented approximately \$4.7 million in probability-weighted potential annual value.

The pipeline includes opportunities at varying stages of development, including early-stage leads, active capture opportunities, customer-review or waiting-for-answer opportunities, and closed engagements. Of the 38 opportunities, the Company's internal summary identified 11 in lead stage, 12 in active capture stage, seven awaiting customer response or next-step activity, and eight classified as closed.

"Our objective is to build a disciplined commercial engine around capabilities that are already being delivered today," said Greg Godbout, Chief Innovation Officer. "The pipeline reflects growing market interest in practical AI leadership, AI implementation, data science, workforce enablement, and resilience intelligence. We are focused on qualifying opportunities carefully, delivering well for current clients, and converting the right opportunities into durable commercial relationships."

Diversified AI and Resilience Opportunity Base

GCEI's AI Division, including Flamelit Consulting LLC, is pursuing a diversified portfolio of

opportunities across commercial enterprises, professional services, data-intensive organizations, governments, technology providers, infrastructure and resilience applications and public-interest channels.

The pipeline includes opportunities across the following solution categories:

- Fractional CAIO and embedded AI leadership: Executive-level AI strategy, roadmap development, governance, implementation oversight and organizational adoption support.
- AI strategy and business-development support: AI readiness, go-to-market planning, proposal support, capture intelligence and AI-enabled growth initiatives.
- Data science and AI-enhanced operations: Predictive analytics, recordkeeping enhancement, knowledge systems, workflow automation and operational decision support.
- AI workforce delivery: Recruiting, training, and deployment of AI and technical professionals in support of customer modernization requirements.
- Resilience intelligence and disaster-readiness solutions: Opportunities related to ResilientIQ and related applied-AI concepts intended to support preparedness, operational awareness, resource planning and recovery decision-making.
- Enterprise and public-interest modernization: AI-enabled applications for organizations navigating complex operational, infrastructure, environmental and mission-oriented challenges.

In August 2026, GCEI reported more than 160% growth in average monthly contract value for its Fractional CAIO services, reflecting demand for flexible executive AI leadership and practical implementation support.

“Customers are increasingly looking beyond isolated AI pilots,” said Greg Godbout, Chief Innovation Officer and Director of Global Clean Energy. “They need partners that can help connect strategy, data, workforce, governance, product development and implementation. Our pipeline spans those needs, with a focus on applications where AI can support real operational decisions and measurable outcomes.”

Disciplined Growth and Commercial Conversion

GCEI’s AI Division provides a portfolio of services and solutions that includes AI strategy and governance, data science and predictive analytics, AI-enhanced products and workflows, Fractional CAIO leadership, AI Growth Lab support, AI workforce delivery, and resilience intelligence.

The Company intends to continue qualifying and advancing opportunities selectively, with emphasis on engagements that support its strategy of building recurring or renewable service relationships, expanding delivery capabilities, and developing scalable applied-AI solutions.

GCEI expects to provide further updates regarding commercial execution, product development, strategic partnerships, and material customer or contract developments as appropriate.

About Global Clean Energy, Inc.

Global Clean Energy, Inc. (OTCID: GCEI) drives the transition to sustainable infrastructure through innovative AI, energy solutions, and resilience technologies. The Company is building a diversified platform designed to serve the growing need for smarter energy decisions, infrastructure reliability, and applied intelligence across commercial and public-sector markets.
