

Rochester Arthritis & Joint Pain Center Highlights Non-Surgical Treatment Options for Chronic Knee Pain

Before knee replacement, learn about non-surgical options that may help reduce chronic knee pain and improve mobility for appropriate patients.

ROCHESTER, NY, UNITED STATES, October 6, 2026 /EINPresswire.com/ -- [Rochester Arthritis & Joint Pain Center](#) encourages patients with chronic knee pain to understand their treatment options before deciding on joint replacement surgery. For many people living with chronic knee pain, hearing words such as “arthritis,” “cartilage loss” or “bone-on-bone” can make knee replacement surgery feel inevitable. But an abnormal X-ray does not necessarily mean surgery is the only or immediate next step.

Options for chronic knee pain

Rochester Arthritis & Joint Pain Center, located in Fairport New York, is encouraging patients to learn about non-surgical treatment options that may be appropriate before making a decision about knee replacement. “Knee replacement can be an effective and appropriate treatment for some patients with advanced arthritis,” the center explains. “But the decision should be based on more than an X-ray. A patient’s pain, mobility, strength, overall health and ability to perform everyday activities are all important parts of the picture.”

When Knee Pain Starts Changing Daily Life

Knee arthritis often develops gradually. Patients may initially notice discomfort only during certain activities, but over time everyday movements can become more difficult.

Some patients begin modifying their lives around their knees without realizing how much has

changed. They may avoid stairs, stop taking longer walks, look for the closest parking space or give up recreational activities they once enjoyed. That decline in function is an important reason to have the knee properly evaluated.

What Non-Surgical Options Are Available?

Treatment depends on the individual patient and the cause and severity of the knee problem. No single treatment is appropriate for every patient, and outcomes cannot be guaranteed. The goal should not simply be to “avoid surgery at all costs.” Instead, patients should understand the reasonable options available to them and make an informed decision based on their individual circumstances. For someone who has recently been told they have significant arthritis or who simply wants to understand whether other options remain getting another evaluation before making a major surgical decision can provide valuable information.

An Individualized Approach to Chronic Knee Pain

At Rochester Arthritis & Joint Pain Center, patients with chronic knee pain are evaluated to better understand what may be contributing to their symptoms and whether they may be appropriate candidates for non-surgical care. The centers focus on helping patients understand their condition, their available options and realistic goals for reducing pain and improving mobility.

For patients considering knee replacement, asking questions before making a final decision is reasonable:

How advanced is my condition? What treatments have I already tried? Are there reasonable non-surgical options remaining? And at what point would surgery become the better choice? Having those answers can help patients make a more informed decision about their care.

About Rochester Arthritis & Joint Pain Center

Arthritis & Joint Pain Centers provides evaluation and non-surgical treatment options for appropriate patients experiencing chronic knee, hip and other joint pain. The center serves patients throughout Western and Central New York.
