

Simmitri and Air Care Partner to Help California Properties Prepare for Growing Energy and Climate Demands

California roofing, HVAC, solar, and battery companies unite to offer properties a coordinated approach to comfort, efficiency, and energy resilience.

SAN JOSE, CA, UNITED STATES, October 5, 2026 /EINPresswire.com/ -- [Simmitri](#), a California-based roofing, solar and energy services company, and [Air Care Heating & Cooling](#), a San Jose-based HVAC company, have announced a partnership to coordinate roofing, heating and cooling, solar, battery storage and related energy services as California property owners increasingly consider comfort, energy efficiency and energy resilience together. The partnership comes as solar-plus-storage adoption grows in California and extreme heat and other conditions place greater attention on household and commercial energy use and reliability.

“

This partnership reflects the way property owners are thinking about their homes and businesses today,”

Joey Mangano, CEO of Air Care Heating & Cooling

The collaboration connects two established local service businesses with complementary capabilities. Simmitri, which traces its origins to 1995, provides roofing, solar, battery storage and energy-related services for residential and commercial properties. Air Care has served San Jose and surrounding communities since 2013, providing heating, cooling, indoor air quality and HVAC maintenance services to homes and businesses.

For customers, the partnership is intended to make it easier to evaluate property improvements that can affect one another. A roof replacement, for example, may be relevant when considering a future solar installation, while HVAC upgrades can influence a property's electricity consumption and energy-management requirements. Bringing the companies' capabilities

together allows customers to consider these projects in a more coordinated manner rather than managing each need independently.

"Homeowners and businesses are increasingly looking at their properties as interconnected systems rather than a collection of individual projects," said Jonathan Garcia, CEO of Simmitri. "Our partnership with Air Care gives customers another way to approach those decisions. Simmitri brings its experience in roofing, solar and energy systems, while Air Care brings its expertise in heating, cooling and indoor air quality. Together, we can help customers evaluate how those systems fit together."

Air Care's service portfolio includes HVAC installation, repair and maintenance, heat pumps, air conditioning, heating and indoor air quality solutions, with service extending across San Jose, Santa Clara and surrounding Silicon Valley communities. The company also provides commercial HVAC services, including installation, replacement, repair and maintenance.

"This partnership reflects the way property owners are thinking about their homes and businesses today," said Joey Mangano, CEO of Air Care Heating & Cooling. "Comfort, energy use and the physical condition of a building are interconnected. By working alongside a company with established roofing, solar and energy capabilities, Air Care can give customers a more coordinated path when their needs extend beyond heating and cooling."

Why It Matters

California's energy landscape is creating greater overlap between building systems. The U.S. Energy Information Administration reported a significant increase in the share of new California residential solar installations paired with battery storage while state energy planners have identified extreme heat and changing electricity demand as important considerations for

Simmitri Solar Services

electricity reliability.

The partnership provides a local service model for property owners considering those interconnected needs. Rather than treating roofing, HVAC, solar and battery storage as entirely separate projects, customers can explore how improvements in one area may affect decisions in another.

Simmitri has developed experience integrating roofing and solar projects, including projects that combine roof replacement, solar installation and battery storage. Its current service portfolio also includes commercial solar, roofing, battery storage and energy evaluation services.

The companies expect the partnership to create additional opportunities for residential and commercial customers to coordinate property improvement projects and access complementary services through established local providers.

Media and Customer Inquiries

Media representatives and customers seeking information about the partnership or available services can contact either company directly.

About Simmitri

Simmitri is a California-based roofing, solar and energy services company established in 1995. The company provides residential and commercial roofing, solar energy systems, battery storage, energy evaluation and related services. Simmitri is headquartered in San Jose and serves communities throughout the Bay Area and California.

About Air Care Heating & Cooling

Air Care Heating & Cooling is a locally owned HVAC company based in San Jose, California. Founded in 2013, the company provides residential and commercial heating, cooling, indoor air quality, installation, repair and maintenance services throughout San Jose and surrounding communities.
