

Esmartlock Unveils Complete Locker Lock Portfolio, from RFID Cards to Cloud Mobile Keys

Wireless online control and smartphone access help fitness centers, hospitals, schools and offices move beyond keys and cards.

SEONGNAM, GYEONGGI, SOUTH KOREA, October 6, 2026 /EINPresswire.com/ -- Korean locker lock specialist combines wireless online control and smartphone access to help fitness centers, hospitals, schools and workspace move beyond keys and cards

[Esmartlock](#) Co., Ltd., a South Korean developer of [electronic locker lock](#) solutions, today presented its complete locker lock portfolio to the global market. The line spans conventional RFID card and PIN code locks, wireless online locks with real-time remote control, and cloud-based Smart Code and Mobile Key solutions that turn a smartphone into a secure locker key.

As facilities from fitness clubs and universities to hospitals and government offices move away from mechanical keys, operators need locker systems that are secure, easy to manage and ready for mobile access. Esmartlock positions itself as a single-source supplier for that transition: customers can start with standalone RFID or PIN code locks and move to wireless online or mobile access solutions as their needs grow.

Wireless online control: e-Smart Ultra series

The e-Smart Ultra series is Esmartlock's flagship wireless online locker lock line. Paired with the database-driven e-Smart Ultra Plus+ lock operation software, it lets facility managers monitor and control every lock remotely in real time, giving them full lock control while improving the efficiency of day-to-day facility administration.

Smartphone access: the e-Smart mobile line

Wireless Online Smart Locking Solution Provider

Built on Bluetooth Low Energy (BLE) mobile access technology and an enhanced security algorithm, Esmartlock's mobile line makes locker access safer for users and simpler for operators:

- e-Smart Mobile ID lets users choose and operate any empty locker in Free Selection mode without an RFID card or other credential, reducing the cost and staff workload of issuing and collecting cards.
- e-Smart Mobile Sync, which the company describes as the world's first mobile access solution based on key synchronization between an RFID card and a smartphone, carries the same access rights on both credentials. It supports assigned mode with multi-user and multi-lock functions, making it suitable for sites with demanding operating requirements.
- [e-Smart Mobile Key](#) delivers encrypted digital keys generated through the e-Smart Cloud Server, granting access to a specific locker lock or door lock from anywhere in the world. Each key is valid only for a defined period, and access privileges expire automatically when that period ends.

Built for partners

Esmartlock works with brand furniture manufacturers, lock distribution channels and dealers, and access solution providers worldwide, and is actively seeking new partners in overseas markets. The company supports them with:

- Technology leadership — continuous development of new designs and technologies across standalone, wireless online and cloud-based mobile access locks
- Customization — tailor-made hardware and software customization services to meet project-specific requirements
- Quality commitment — ongoing improvement of both products and quality processes to

The diagram illustrates the Esmartlock system architecture. At the top, it identifies 'eSmart LOCK' as the 'Wireless Online Smart Locking Solution Provider'. The central 3D rendering shows a locker bank with various lock types installed. Surrounding this are callouts for specific components: 'Esmart Wireless Online Lock ZP100WR', 'Access Point AP200', 'Esmart Wireless Online Lock SL300TW', 'Esmart Wireless Online Lock PT300BWR', 'Kiosk Terminal', 'Esmart eDisplay Lock SL300EWR', 'Esmart Furniture Lock FX300', 'Esmart Furniture Lock FX200 Wind Power', 'Wall Reader & Info Terminal', and 'Esmart Ultra Cloud Server & Client Software'. Below the diagram, the text 'eSmart Wireless Online Lock' is displayed. The bottom section of the complex block features a collection of various Esmartlock hardware models, including different styles of door locks, furniture locks, and terminals, arranged in a cluster.

eSmart Wireless Online Lock

Esmartlock

deliver reliable locks and ensure customer satisfaction

"Our goal is to give every partner a clear path from traditional card and PIN code locks to fully connected, mobile-ready locker systems," said [Sunmo An], [Director] of Esmartlock. "Operators want fewer cards to manage and users want to carry just their phone. By combining a complete product range with customization services, we help our partners deliver locker solutions that fit each customer's site."

Esmartlock's solutions are designed for workspace and resorts, fitness centers, schools and universities, hospitals and clinics, and government facilities. Partners interested in distribution, OEM collaboration or project inquiries can find product information at www.esmartlock.com.
