

Path Infotech Takes Enterprise AI Past the Proof of Concept and Into Production at Oracle AI World 2026

Oracle partner to show AI running inside core ERP, high-volume operations and managed services, with live customer results

LAS VEGAS, NV, UNITED STATES, October 7, 2026 /EINPresswire.com/ -- Most AI initiatives stall at the proof of concept. They impress as pilots, then slow down when AI has to work inside core systems, on trusted data, under real controls and at real volume. At [Oracle AI World 2026](#), Path Infotech will show what it takes to get past that point. The event runs Oct. 25–28 at The Venetian in Las Vegas, and Path Infotech is a sponsor at Booth #6043.

Path Infotech builds AI into the Oracle platforms customers already run, including Oracle Fusion Applications, Oracle E-Business Suite and Oracle Cloud Infrastructure, governed the right way from day one. Everything on show is already running in customer environments, with results that include invoice processing up to 80% faster, RFP/RFQ response assessment in less than half the time and IT operations costs cut by 40%.

What attendees will see

Operationalizing AI across your enterprise

AI-native ERP: Native and custom AI and agentic AI capabilities embedded directly in Oracle

Fusion and E-Business Suite, so finance, procurement and operations teams get recommendations and automation inside the workflows and approval controls they already use.

AI for operational efficiency: Solutions for high-volume, document-heavy work where AI pays back fast:

- [Supplier](#): supplier onboarding to payment, cutting invoice-to-payment costs by up to 80%.
- IntellidocAI: document capture and routing into the ERP, with up to 80% faster processing with 90+% extraction accuracy.
- RFP/RFQ response assessment: scores vendor responses against each buyer's own criteria, with a traceable record, in less than half the time.
- EZinsights: cited answers from policies, contracts and governed data, reducing routine requests to IT and BI teams.
- Medical claims processing: checks claims against policy and coding rules and flags anomalies and potential fraud, with a full audit trail.

TriNetraOPS: Path AI-Ops builds AI into monitoring, triage and resolution across infrastructure, cloud, database and security operations. Customers have seen a 40% reduction in IT operations costs and resolution up to five times faster.

AI in how Path builds: Path Infotech uses AI across its own software modernization and development projects to ship faster and with fewer defects.

"Our customers no longer ask what AI could do. They ask whether it can run every day inside the systems the business depends on," said Pankaj Ratra, Co-founder and Director – Business Development & Marketing, Path Infotech.

"Everything we're bringing to Las Vegas is already in production, with results we can put in front of a CFO. That's how we turn AI strategy into AI in production."

Meet the team

Pankaj Ratra and Vishal Aggarwal, Vice President – Cloud & Platform Management, will lead the Path Infotech team at the booth. Attendees can book time at pathinfotech.com/OracleAIworld26.

About Path Infotech

Path Infotech is a global enterprise technology company and Oracle Partner that helps organizations modernize and run their core systems, and put AI into production on data they can trust. It has more than 35 years of experience and over 450 customers, with operations in India, Singapore, Australia and the United States, Path Infotech has served enterprises since 1991. Its teams deliver across Oracle applications, data, integration, cloud and AI, supported by global managed services. Three of its brands are CLOUDnU for cloud adoption and

infrastructure, ServitiumCRM for aftersales service management, and eniwhere for AI powered enterprise solutions. Learn more at www.pathinfotech.com.
