

Innovatrics Identity Verification Helps DigiSign Expand Trusted Digital Signing to 120+ Countries

DigiSign integrates Innovatrics document capture, selfie verification and liveness detection to support identity verification for more signers and markets

BRATISLAVA, SLOVAKIA, SLOVAKIA, October 8, 2026 /EINPresswire.com/ -- Innovatrics, an independent provider of biometric technology, today announced that DigiSign, a signing platform by Digital Solutions, has integrated Innovatrics Identity Verification Technology to support trusted identity verification during the digital signing process.

DigiSign supports companies in signing business, HR and client documents online, including cases that require stronger identity verification. Alongside Bank iD, which allows users in Czechia to verify their identity through online banking, DigiSign has added another verification route for signers using other forms of identification, including those based abroad.

Identity Verification Built into the Signing Process

Innovatrics web components handle [identity document](#) and [selfie capture](#) directly within DigiSign's interface, while Innovatrics Identity Verification runs in the background. The setup allows DigiSign to maintain its own UX and processes while adding remote identity verification to support a broader range of signers.

The solution runs on DigiSign's own servers, allowing personal data to remain within its controlled environment and supporting client requirements for data retention and anonymization. This deployment model is particularly relevant for sectors such as banking and insurance with strict data handling requirements.

"Thanks to Innovatrics, we received a great [technical solution](#) that improved the value of our product and created new business opportunities. I also appreciate Innovatrics' personal and proactive approach, where they were interested in our needs and looked for solutions with us," said Pavel Pavlas, Head of Product at DigiSign.

Extending Digital Signing to More Markets

With Innovatrics Identity Verification, DigiSign can extend trusted verification to signers in 120+ additional countries, including people using other forms of identification alongside Bank iD. This gives businesses another way to keep signing processes online for users in Czechia and abroad.

Innovatrics Identity Verification also supports DigiSign's standalone identity verification service, allowing businesses to confirm identity before a signature, during onboarding, or at other points where stronger identity proof is required. The service is already used by clients including Raiffeisenbank, E.ON and Raynet, with usage growing by 5–10% month over month since launch.

About Innovatrics

Innovatrics is an independent provider of biometric technology for identity management and secure digital services. Since 2004, the company has delivered biometric solutions that have helped more than 1 billion people in 80+ countries, supporting use cases ranging from criminal investigation and border control to digital onboarding and secure access.
