MyGovernmentOnline (MGO) and Blitz AI Partner to Expand AI-Powered Plan Review for Local Governments

MGO and Blitz AI partner to integrate AI-powered plan reviews into existing government workflows, helping agencies reduce delays and improve review efficiency.

TAMPA, FL, UNITED STATES, October 19, 2026 /EINPresswire.com/ -- MyGovernmentOnline (MGO) and Blitz AI have entered a strategic technology partnership that combines MGO's established local government platform with Blitz AI's specialized plan review technology to help cities and counties modernize the development review process.

> Our partnership with Blitz AI brings specialized AI models and purpose-built technology into MGO Connect, giving government agencies access to powerful AI tools while preserving flexibility."
>
> *Ryan Hutchinson, Chief Technology Officer, MGO*

Through this partnership, Blitz AI's automated plan pre-check and review capabilities will be integrated into MGO Connect, allowing participating agencies to access AI-powered tools directly within the technology environment and workflows they already use.

Built by government for government, MGO provides an integrated digital solution suite supporting permitting, planning and zoning, licensing, code enforcement, public works, asset management, and community engagement. MGO is trusted by more than 400 jurisdictions nationwide. The addition of Blitz AI expands the capabilities available to MGO customers while maintaining the connected workflows, security, and infrastructure their agencies rely on.

Blitz AI provides AI-powered pre-checks and plan reviews, helping reduce incomplete submissions by identifying missing information before plans reach agency staff, while also automating and assisting with time-consuming checks during the review process so reviewers

can complete reviews faster and focus on the issues that require their professional judgment.

"Our AI strategy at MGO is built around flexibility—giving government agencies access to the best technology without locking them into a single AI provider or model," said Ryan Hutchinson, Chief Technology Officer of MGO. "That's one of the reasons we're excited to partner with Blitz AI. Their approach combines specialized models, intelligent routing, and other purpose-built AI techniques rather than relying solely on a general-purpose language model. By bringing those capabilities into MGO Connect alongside our own AI tools, we can give agencies a powerful, integrated solution while preserving the flexibility to adopt the best technologies as AI continues to evolve."

The integration will provide an AI-powered first review of submitted plans, identifying missing information and potential compliance issues for agency reviewers. Review staff will receive marked-up plans and supporting reports to assist their work, while all final interpretations, findings, approvals, and compliance decisions will remain with the appropriate government professionals.

By combining MGO's deep understanding of municipal operations with Blitz AI's specialized plan review technology, the partnership will give local governments a connected and scalable way to improve review efficiency without replacing their existing workflows or professional judgment.

"Most permit delays start before a reviewer ever opens the set, incomplete submissions, missing information, issues nobody caught upstream. That's the work AI should take on. MGO built its platform inside government, for government, and it shows in every workflow. Our job in this partnership is simple: catch the problems early, hand reviewers a cleaner starting point, and leave every final decision exactly where it belongs with the professionals behind the counter." said Arjun Choudhary, CEO of Blitz AI.

As development volumes grow and review teams face increasing demands, earlier identification of incomplete submissions and compliance issues can reduce repetitive work and allow reviewers to focus more time on complex projects and community priorities.

About Blitz AI
Blitz AI provides AI-powered pre-check and plan review technology that helps local governments evaluate submitted plans more quickly, consistently, and efficiently. Built for development services teams, the platform helps automate routine plan analysis, identify potential code and compliance issues earlier in the process, and reduce the manual workload associated with traditional plan review. Blitz AI currently serves governments across the United States, with

expansion into Canada and the Gulf Region underway, helping agencies modernize development review while maintaining the consistency and defensibility required in the public sector.
