

Five Reputable Custom Cosmetic Packaging Box Manufacturers in China 2026: Advancing Packaging Design

Exploring Developments in Cosmetic Packaging Design and Manufacturing

CALIFORNIA, CA, UNITED STATES, October 20, 2026 /EINPresswire.com/ -- GUANGZHOU, China — October 20, 2026 — China's [custom cosmetic packaging box](#) industry continues to evolve as beauty brands seek distinctive presentation, reliable product protection and packaging materials that support increasingly detailed compliance requirements. This 2026 industry review introduces five companies associated with cosmetic or related packaging: Guangzhou Xingyichang Packaging Products Co., Ltd. (DR.BOX), Xiamen Finer Packaging Co., Ltd., Shaoxing Tiger Packaging Co., Ltd., Suzhou Honest Packaging Co., Ltd. and Qingdao Bright Print & Packaging Co., Ltd.

Logo for Drbox Beauty Packaging

The review focuses on packaging formats, manufacturing information, material selection and production considerations relevant to beauty brands. Guangzhou Xingyichang Packaging Products Co., Ltd., operating under the DR.BOX brand, is the featured company, with a more detailed profile based on the company information available for this article. The other companies are introduced according to their publicly available business information, with distinctions maintained between paper gift-box manufacturing, cosmetic containers and thermoformed packaging.

Grand View Research estimates that the global cosmetic packaging market was valued at USD 32.7 billion in 2023 and projects it to reach USD 44.3 billion by 2030. Custom Market Insights estimates that the luxury packaging market was valued at USD 14.3 billion in 2024 and forecasts USD 23.6 billion by 2033, representing a compound annual growth rate of 5.1%. Although these figures cover broader packaging categories rather than custom cosmetic boxes alone, they illustrate the continuing importance of presentation, material selection and packaging functionality.

Regulatory requirements are also influencing procurement decisions. The European Union's Packaging and Packaging Waste Regulation (PPWR) introduces requirements and restrictions in phases, including provisions concerning PFAS in packaging and recyclability. For a custom cosmetic gift box, this makes paper grades, coatings, adhesives, inserts and end-of-life claims relevant to the packaging specification, alongside visual design.

In the United States, cosmetics must comply with applicable requirements under the Federal Food, Drug, and Cosmetic Act, the Fair Packaging and Labeling Act and related regulations. Product identity, net quantity and ingredient declarations must be accommodated where required. Although the precise obligations depend on the product and its marketing, packaging artwork should be reviewed for regulatory text before decorative elements are finalized.

Trade data requires similar care. HS heading 4819 covers paper and paperboard packing containers, but it is too broad to measure the custom cosmetic packaging box segment independently or establish the export performance of individual manufacturers. Supplier comparisons should therefore combine relevant trade classifications with product specifications, factory documentation and sample evaluation.

Design Considerations for Custom Cosmetic Packaging

In 2026, packaging design involves more than surface decoration. A custom printed cosmetic packaging box must balance structure, material, finishing and artwork requirements. The structure affects product protection, assembly, storage and the customer experience.

A rigid cosmetic packaging box is often considered for premium gift sets and prestige beauty products, while a folding cosmetic packaging box may suit retail products and e-commerce programs that prioritize efficient storage and shipment. Other options include a magnetic cosmetic gift box, drawer cosmetic gift box, two-piece cosmetic box or book style cosmetic box. The appropriate format depends on the product dimensions, desired presentation, order volume and packaging budget.

Material selection is equally important. A [skincare packaging box](#) designed for a glass serum bottle requires different insert engineering and protective clearances from a [custom makeup](#)

[packaging box](#) for lipstick, powder or a compact. A premium beauty packaging box may combine rigid board, specialty paper and fitted inserts, while a lighter folding carton may meet the requirements of a larger retail run.

Sustainable packaging is another consideration for beauty brands. An eco-friendly cosmetic packaging box may use appropriately documented paper materials, reduced-material construction or recyclable inserts. However, environmental claims should reflect the complete packaging specification, including coatings, laminations, adhesives and internal components, rather than the outer paper alone.

Finishing techniques help define the appearance of a custom beauty gift box. A custom cosmetic box with foil stamping can create metallic highlights, while a custom cosmetic box with embossing adds texture and visual depth. These techniques require suitable artwork preparation, tooling and physical sample approval. Regulatory copy, barcodes and other required information should be accommodated before the dieline is finalized.

Five Manufacturers and Packaging Companies

1. Guangzhou Xingyichang Packaging Products Co., Ltd. (Drbox Beauty Packaging)

Founded in 2004, Guangzhou Xingyichang Packaging Products Co., Ltd. operates the DR.BOX brand from Nansha, Guangzhou. The company reports a self-owned production base covering 15,000 square meters, a workforce of 200 employees, a 30-person research and development team, annual output of 50 million units and an export ratio of 60%. Its stated export markets include the Middle East, Europe, Southeast Asia, North America and Africa. DR.BOX also reports more than 1,000 cumulative clients worldwide. These figures are company-reported information.

The company's listed product range focuses on rigid gift boxes and includes lid-and-base boxes, book-shaped rigid boxes, drawer gift boxes, double-door boxes, hinged-lid boxes, specialty-shaped boxes, fan-shaped boxes, window display boxes, 3D double-open boxes, multilayer drawer boxes and ribbon gift boxes. These structures can be adapted for custom cosmetic gift box projects, skincare collections, fragrance sets, makeup kits and other premium beauty packaging applications.

For brands developing a luxury cosmetic packaging box, structural options and decorative finishes can be coordinated around the product and its presentation requirements. The company's listed finishing capabilities include gold, silver and laser hot stamping, partial UV, embossing, graining, die-cut windows, special-shaped cutting and magnetic closures. Such options can support a custom cosmetic box with foil stamping or a custom cosmetic box with embossing, subject to the approved artwork, sample and production specification.

The supplied product information lists a minimum order quantity (MOQ) of 500 units and a lead time of 7–30 days across the stated range. According to its FAQ, DR.BOX provides physical samples within 1–3 working days and offers revisions before mass-production approval. Its stated sampling process includes Pantone color matching and customized brand colors. These timings and terms should be confirmed for each project, as complexity, materials and order specifications can affect production schedules.

DR.BOX lists an ISO 9001 quality management system certificate, an FSC Chain of Custody certificate, a Gold Plus Supplier Assessment Certificate, an amfori social audit manufacturing certificate, a BSCI audit report, a High and New Technology Enterprise Certificate and a Guangzhou Cleaner Production Enterprise Certificate. The company also reports registered trademarks and packaging-related patents. Buyers should verify current certificate validity, scope and applicable production sites during qualification.

The company describes a quality-control process covering color consistency, structural precision and production consistency. It also lists paper-based material options and FSC-related documentation. For sustainable packaging programs, buyers should confirm that the specific paper, coating, adhesive and insert combination supports the intended environmental claims.

2. Xiamen Finer Packaging Co., Ltd.

Xiamen Finer Packaging Co., Ltd., established in 2008, is a paper packaging manufacturer and exporter based in Xiamen, Fujian Province. Its published product range includes cosmetic packaging boxes, paper packaging boxes, printed cards, labels and other customized paper packaging products. According to its company profile, its production equipment covers multi-color printing, lamination, die-cutting, stamping, embossing and gluing, supporting different structural and decorative requirements. For beauty brands developing a custom cosmetic packaging box, skincare packaging box or custom printed cosmetic packaging box, these capabilities are relevant to printed cartons and paper-based gift packaging. The company also describes its experience serving international customers and lists FSC-related material options and quality-management information. Specific box structures, minimum order quantities, sample schedules and applicable certification scopes should be confirmed for each project.

3. Shaoxing Tiger Packaging Co., Ltd.

Shaoxing Tiger Packaging Co., Ltd. is included in this industry review as a company requiring further verification of its current cosmetic packaging operations. Before describing its capabilities as a manufacturer of custom cosmetic packaging boxes, buyers should confirm the company's registered business identity, manufacturing address and current product catalogue.

For projects involving a custom cosmetic gift box, luxury cosmetic packaging box or custom makeup packaging box, relevant evaluation criteria include available box structures, printing and finishing processes, insert options, sample development and production consistency. These details are particularly important when packaging must accommodate different bottle, jar or makeup product dimensions. A review of current product samples and project-specific documentation would help establish whether the company's capabilities match the requirements of a particular beauty packaging program.

4. Suzhou Honest Packaging Co., Ltd.

Suzhou Honest Packaging Co., Ltd. was established in 2013 and is identified in Medtec China exhibitor information as a packaging manufacturer specializing in the development, design, processing and production of thermoformed packaging. Its published company profile describes a range of plastic materials, including PETG, APET, PVC, PP, PE, PS, PC and ABS, with applications across industries such as medical products, electronics, food, cosmetics, stationery and gifts. For beauty packaging projects, thermoformed trays and inserts can help secure products inside a carton or gift box, complementing the outer packaging structure. This capability may be relevant to a custom beauty gift box or skincare packaging box that requires fitted internal protection. Buyers should confirm material suitability, the intended packaging application and the company's current capabilities before specifying an insert for a particular cosmetic product.

5. Qingdao Bright Print & Packaging Co., Ltd.

Qingdao Bright Print & Packaging Co., Ltd. is included in the review as a candidate for further supplier research, although sufficient reliable public information was not identified to establish its current cosmetic packaging product range. For buyers considering the company for a custom cosmetic packaging box or custom printed cosmetic packaging box project, the initial assessment should focus on confirming its legal business identity, factory location, available packaging formats and printing capabilities. Additional information on paper materials, structural design, finishing processes, sample development and quality-control procedures would help determine its suitability for beauty packaging applications. For premium projects involving foil stamping, embossing or fitted inserts, buyers should request physical samples and project-specific specifications before confirming a production arrangement.

Packaging Trends and Procurement Implications

Several developments are shaping custom cosmetic packaging procurement in 2026.

First, structure and presentation are increasingly considered together. A magnetic cosmetic gift box, drawer cosmetic gift box or book style cosmetic box can create a distinctive opening experience, but each format has implications for material use, assembly time and shipping protection. The best choice is the structure that fits the product and the intended sales channel, not necessarily the most elaborate design.

Second, customization needs to be balanced with production feasibility. A low MOQ cosmetic packaging box can help a new beauty brand test a product launch, while small batch cosmetic packaging can support limited editions and seasonal gift sets. However, tooling, sample development, print setup and finishing requirements still affect the unit cost and schedule. Buyers should request a clear quotation that separates one-time setup costs from recurring production costs.

Third, material documentation is becoming a more important part of sustainable packaging. An eco-friendly cosmetic packaging box should be assessed against the complete bill of materials. Paper sourcing, coatings, adhesives, inserts and recyclability in the destination market all matter. A sustainable packaging statement should be supported by documentation appropriate to the specific product and market.

Fourth, artwork planning should precede final decoration. A custom makeup packaging box or skincare packaging box may require product information, ingredient declarations, barcodes and other market-specific text. Leaving insufficient panel space until after foil stamping, embossing or lamination has been approved can lead to artwork revisions and production delays.

Company Statement: DR.BOX

DR.BOX describes its business as providing premium, personalized packaging solutions for international beauty and fragrance brands. The company states that its production base and finishing equipment support the development process from sampling through mass production and insert assembly.

It also reports serving more than 1,000 clients worldwide. These statements represent company disclosures rather than independent audit findings. Buyers should assess them alongside current factory documentation, product samples and project-specific quotations.

Market Outlook

China's custom cosmetic packaging box sector is expected to remain competitive as beauty brands balance presentation, product protection, order flexibility and material documentation. Rigid gift boxes, folding cartons, custom inserts and decorative finishing will continue to serve different product categories and distribution channels.

For manufacturers, the ability to translate a design into a repeatable production specification is an important part of the process. For buyers, supplier evaluation should combine structural samples, material records, artwork review, realistic lead times and clearly documented order terms.

DR.BOX's reported product range, sampling process and production information provide a basis for further evaluation in premium rigid-box projects. The other companies offer different points of reference across paper packaging, cosmetic containers and thermoformed inserts, with final suitability depending on the specific requirement and the evidence confirmed during supplier qualification.

The five-company review is intended to support industry research and supplier discovery. It is not an independently audited ranking, and buyers should verify current capabilities and documentation before placing an order.
