

The Acute Myocardial Infarction Market Is Projected to Grow at a 5.7% CAGR by 2030

The Business Research Company's The Acute Myocardial Infarction Global Market Report 2026 – Market Size, Trends, And Forecast 2026-2035

LONDON, GREATER LONDON, UNITED KINGDOM, October 29, 2026 /EINPresswire.com/ -- [The acute myocardial infarction market](#) has been experiencing notable growth recently, driven by advancements in medical technology and increased awareness of cardiovascular health. As heart-related conditions continue to affect a significant portion of the global population, this market is set to expand further in the coming years. Let's explore the current market size, growth drivers, regional dynamics, and key trends shaping the future of acute myocardial infarction care.

Market Size and Anticipated Growth in the Acute Myocardial Infarction Market

The acute myocardial infarction market has witnessed substantial growth over recent years. It is projected to increase from \$1.56 billion in 2025 to \$1.65 billion in 2026, reflecting a compound annual growth rate (CAGR) of 6.0%. This growth during the historical period has been driven by a rise in coronary artery disease cases, the expansion of hospitals and specialized cardiac centers, greater use of electrocardiogram and imaging technologies, heightened awareness of acute myocardial infarction symptoms, and increased cardiac research efforts.

Acute Myocardial Infarction Market Report 2026

The Business Research Company

The Acute Myocardial Infarction Market Size

The Business Research Company

The Business Research Company

Looking ahead, the acute myocardial infarction market is expected to maintain strong growth momentum. By 2030, the market size is forecast to reach \$2.06 billion, growing at a CAGR of 5.7%. This expansion is anticipated due to the development of new thrombolytic drugs, rising adoption of minimally invasive cardiac procedures, the integration of sophisticated imaging technologies, growth in personalized cardiology treatments, and the use of artificial intelligence and big data in cardiac care. Emerging trends include wider acceptance of percutaneous coronary intervention (PCI) procedures, increased reliance on advanced cardiac biomarkers for early diagnosis, emphasis on minimally invasive therapies, the growth of telecardiology and remote patient monitoring, as well as enhanced awareness and prevention programs related to acute myocardial infarction.

Understanding Acute Myocardial Infarction and Its Causes

Acute myocardial infarction (MI), commonly known as a heart attack, occurs when the blood supply to heart muscle tissue is suddenly reduced or stopped due to blockage in one or more coronary arteries. This results in the death of heart muscle cells (myocardial necrosis). The primary cause is typically the rupture of atherosclerotic plaques, which obstructs blood flow abruptly and leads to tissue damage.

How Rising Hypertension Cases Are Fueling Market Growth

One of the critical factors contributing to the growth of the acute myocardial infarction market is the increasing prevalence of hypertension. Hypertension is characterized by consistently high blood pressure, which significantly raises the risk of heart disease, stroke, and other severe health issues. This condition is becoming more widespread due to sedentary lifestyles, often linked to desk-bound jobs, extended screen time, and a lack of physical activity. High blood pressure harms arteries, encourages plaque accumulation, and raises the likelihood of blood clots that can block coronary arteries, triggering heart attacks.

For example, in September 2025, the World Health Organization reported that approximately 1.4 billion adults aged 30–79 worldwide were living with hypertension in 2024. This figure represents nearly one-third of the global population in this age range. Such alarming statistics highlight why the rise in hypertension is a significant driver for the expanding acute myocardial infarction market.

Regional Market Leadership and Growth Prospects

In 2025, North America held the largest share of the acute myocardial infarction market. However, the Asia-Pacific region is expected to experience the fastest growth during the forecast

period. The market analysis spans several key regions, including Asia-Pacific, South East Asia, Western Europe, Eastern Europe, North America, South America, the Middle East, and Africa, providing a comprehensive view of global market trends and opportunities.

New analytical features added to our 2026 market reports:

- Market attractiveness scoring and analysis
- Total addressable market (TAM) analysis
- Company scoring matrix graphics and tables
- Excel-based forecasting dashboards
- Market hotspots infographics
- Key technologies and future trend analysis
- Updated graphics and tables
