

# Penta Security Named Among Notable Vendors in Web Application Protection Platforms Landscape

SEOUL, SOUTH KOREA, October 29, 2026 /EINPresswire.com/ -- Penta Security, a cybersecurity company, announced that it has been included in Forrester's The Web Application Protection Platforms Landscape, Q3 2026. Forrester is widely recognized as one of the world's leading market research firms.

Listed among the Notable Vendors included in the report, Penta Security is a South Korean company included in the report, which to Penta Security demonstrates the global competitiveness of its web application security technologies.

This is the the first Forrester WAPP Landscape report. The new market category defines WAPP as "Unified, integrated platforms that examine input to and responses from web applications, mobile apps, and APIs to filter application traffic according to defined policies; to detect and block application attacks, volumetric attacks, business logic attacks, and AI attacks; and to recommend and enforce security policies based on attack signatures, protocol standards, and anomaly detection."

Forrester asked each participating vendor in the report to select the top three extended use cases that it focuses on. These are three use cases, beyond the core ones, that the vendor wants customers to recognize as its areas of focus. Penta Security is shown in the report for having selected AI attack protection, client-side protection, and runtime application protection as top reasons clients work with them out of the extended use cases. These capabilities have become increasingly important as web attacks expand beyond traditional server environments into application runtime processes and users' browsers.

Penta Security delivers advanced web application security capabilities through [WAPPLES](#), its intelligent WAAP powered by AI-based detection engine, and [Cloudbric](#), its cloud security SECaaS platform.

“For us, being the only company based in South Korea to be included in a report by a global market research firm demonstrates that Penta Security’s web security technologies are competitive in the global market,” said Jihae Lee, CCO (Chief Compliance Officer) of Penta Security “Building on this recognition, we will continue to expand our presence beyond the Asia-Pacific region and strengthen our position in the global cybersecurity market.”

Forrester does not endorse any company, product, brand, or service included in its research publications and does not advise any person to select the products or services of any company or brand based on the ratings included in such publications. Information is based on the best available resources. Opinions reflect judgment at the time and are subject to change. This report is part of a broader collection of Forrester resources, including interactive models, frameworks, tools, data, and access to analyst guidance.
